Service IT Direct Partners with Carahsoft to Bring Legacy IT Lifecycle Support to the Public Sector

Carrollton, TX

Service IT Direct is proud to announce our new partnership with Carahsoft, bringing our third-party maintenance and legacy system support capabilities directly to the public sector. Government agencies face a unique challenge: mission-critical infrastructure that's still running strong but has aged past OEM support windows, all while budgets tighten and replacement cycles stretch longer than ever.

"Government agencies deserve the same reliability and cost savings enterprise clients have trusted us for — without being forced into premature, disruptive upgrades."

Through this partnership, Carahsoft's extensive reach and contract vehicles will connect Service IT Direct's specialized hardware and legacy OS expertise — including HP-UX, OpenVMS, and a broad OEM vendor matrix — with agencies looking to extend the life of their existing systems rather than face costly, disruptive system upgrades.

For Carahsoft, it strengthens their portfolio with a proven, cost-effective alternative to OEM maintenance. For Service IT Direct, it opens the door to serving government IT teams at scale with the same dedicated-engineer model we've built our reputation on.

Together, we're helping agencies get more mileage out of the infrastructure they've already invested in — reliably, securely, and at a fraction of the cost.
